

UVEA

PRICELIST OF EXAMINATIONS AND PROCEDURES

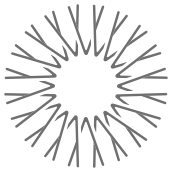

WE ACCEPT PAYMENTS WITH PAYMENT CARDS

INSTALMENT PAYMENTS ALSO AN OPTION

VALID FROM OCTOBER 17, 2022

UVEA

INFORMATION

Patient fees

Patient payments are charged to cover the procedures/ surgeries that are not reimbursed by the insurance company or for which our clinic has no contractual arrangements. Payments also include post-operative check-ups, medications, vitamins, and care for patients and their companions before, during and also after the provision of healthcare.

The fee covers the following services

24-hour emergency phone service following surgery, post-operative check-ups depending on the type of procedure, and the option to choose the date of examination/surgery so that the healthcare is provided without excessive waiting time. In the case a patient chooses an above-standard type of artificial intraocular lens, he/she has to make additional payment for the price of such lens (not covered by the health insurance.)

Available discounts

Regular and external students receive a 10% discount on the price of refractive eye surgery. A €10 discount on examination price for patients forwarded from UVEA optician's practice.

A €100 discount on refractive ophthalmological procedure and a 12% discount on a single purchase at the UVEA optician's practice can be used by:

- employees of the Jessenius Faculty of Medicine (upon submission of their employee card)
- employees of the Teaching Hospital in Martin (upon submission of their employee card)
- members of the Slovak Red Cross (membership is valid more than one year)
- holders of the Janský Plaque (submission of plaque)

Other services provided to our patients

- drinking regimen (coffee, tea, water)
- barrier-free access for people with severe health disabilities and own parking lot
- UVEA has on-site optician's practice and pharmacy
- post-surgery rooms equipped above-standard with own sanitary facility room

How to pay

We accept cash or card payments on the scheduled day of the examination/procedure. If artificial intraocular lens have to be ordered, advance payment for the lens is required.

Advantages of femtosecond laser when performing cataract surgery or replacing intraocular lens (CLE / PRELEX):

- more accurate and simpler creation of capsulorhexis with reliable intraocular lens centring
- a gentler approach to exposed eye tissues, such as the endothelium (compared to the conventional method)
- reduced amount of ultrasound energy absorbed by the eye when draining the lens matter from the nucleus
- reduced traumatization of the lens' suspension apparatus during surgery
- simplification of the course of surgery and subsequent treatment in the case of more complicated cataracts
- reduced time spent on the operating table, and faster post-surgery recovery
